

3.JAMMING & TELECOMMUNICATION ANTENNAS

At SATIMO, we design our antennas with outstanding performance in mind. It begins with a careful design process, alternating simulation and measurements. It extends to the use of the most advanced machining techniques and quality materials to achieve tight mechanical tolerances.

That's why all our antenna characteristics are outstanding. And that's why we can guarantee the best electrical performance/operational bandwidth trade-off.

No competitor matches this level of excellence.

FUNCTION

- Jamming
- Telecommunication

FEATURES

- High and low power
- High and low frequencies
- Wide bandwidth

ANTENNAS

OMNI – DIRECTIONAL ANTENNAS

We offer a range of high and low power omni-directional antennas for jamming applications in the radio communication frequencies or as data transmission base stations for secured-WiFi telecommunications.

For more details visit:

<http://www.satimo.com/content/products/omni-directional-antennas>

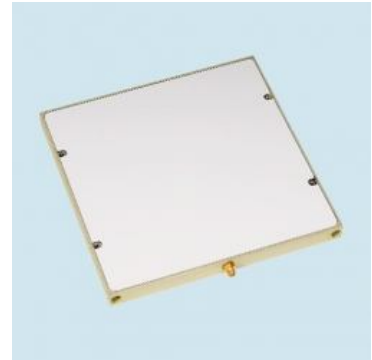

PLANAR ANTENNAS

We offer a range of planar antennas for general transmitting and receiving applications or for point to point communication.

For more details visit:

<http://www.satimo.com/content/products/planar-antennas>

UWB ANTENNAS

We offer a range of UWB antennas for high speed data transmission and for jamming applications at low communication frequency ranges.

For more details visit:
